

TeamViewer

West Wiltshire Micros Remote Support Software

Remote support without installation

With TeamViewer you can remotely control any PC anywhere on the Internet. No installation is required, just run the application on both sides and connect - even through tight firewalls.

Works behind firewalls

The major difficulties in using remote control software are firewalls and blocked ports, as well as NAT routing for local IP addresses.

If you use TeamViewer you don't have to worry about firewalls: TeamViewer will find a route to your partner.

Optimized performance

Whether you have a LAN or dial-up connection, TeamViewer optimizes display quality and speed depending on your network connection.

One solution for everything

While most competitors offer different packages for remote support, remote administration, training and sales (and also charge for them...) TeamViewer is the one-stop solution for everything you need: TeamViewer includes all modules in one simple and very affordable package.

Highest security standard

TeamViewer is a very secure solution. All versions feature completely secure data channels with key exchange and AES (256 Bit) session encoding, the same security standard used by https/SSL.

File transfer

TeamViewer comes with integrated file transfer that allows you to copy files and folders to and from a remote partner - which also works behind firewalls
